

Integrated Science Assessment (ISA) of Ozone and Related Photochemical Oxidants (Final Report, Feb 2013)

Overview

History

Downloads

EPA announced the availability of the final report, *Integrated Science Assessment of Ozone and Related Photochemical Oxidants*. This document represents a concise synthesis and evaluation of the most policy-relevant science and will ultimately provide the scientific bases for EPA's decision regarding the adequacy of the current national ambient air quality standards for ozone to protect human health, public welfare, and the environment.

Ozone (O₃) is one of six principal (or criteria) pollutants for which EPA has established national ambient air quality standards (NAAQS). The Clean Air Act requires EPA to periodically review the scientific basis for these standards by preparing an Integrated Science Assessment (ISA). The ISA, in conjunction with additional technical and policy assessments, provide the scientific basis for EPA decisions on the adequacy of the current NAAQS and the appropriateness of possible alternative standards. These reviews play a significant role in EPA's commitment to ensuring a clean and healthy environment for the public.
